## ORDERING INFORMATION

Entrance Station
*EVAC-ES0101

Floor Station
*EVAC-FS0201

System overview

LMS

Car station

Connection board

Floor station

Connection board

Entrance station

Connection board
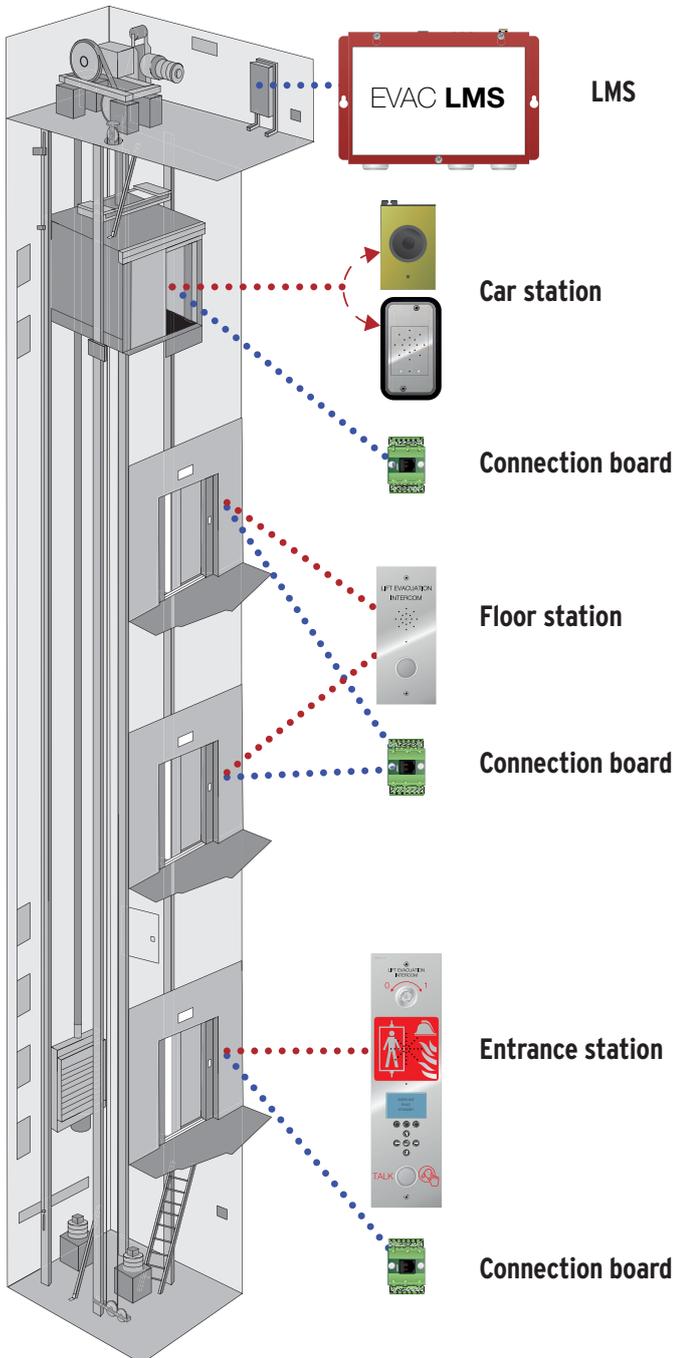

LMS - Lift monitoring system (required)
Power supply and LMS unit. Can be used to send an LMS message through a SafeLine telephone. LMS messages are triggered by events defined in the entrance unit.

Car station (recommended)
Microphone and speaker unit for lift car installation. There can only be one car unit in the system.

Floor station (required)
Landing unit to be fitted on each point of evacuation, normally one per floor. Maximum 99 floor stations can be used in an EVAC system. Minimum 1 unit is required. Button, illuminated when system is active.

Entrance station (required)
The required master unit of the system. All commands and logic is handled by the entrance unit. Max two entry stations can be connected per system.

Connection board (optional)
Connection board used to easily retrieve and share supply power and bus signal for entrance, car and floor stations through an RJ45. Speeds up installation and minimizes cabling needed.

Cabling
Cables for connecting floor stations in serial in the lift shaft are NOT included in the package. Each connection board however comes with a 5m open-ended cable and 2 contacts for simple wiring between voice stations and the lift shaft.
